

Nofence

Trusted by 10,000+ livestock producers globally

Grazing made easy

Virtual fencing for flexible, efficient, and sustainable grazing management.

YOUR GRAZING HUB

The Nofence App

The Nofence app puts you in complete control of your grazing operations, directly from your phone.

Set up and manage boundaries

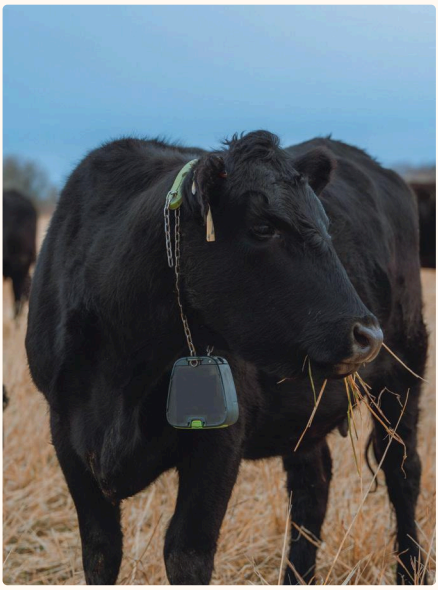

Draw and adjust virtual boundaries and exclusion zones in seconds, whether you're at home, away, or out in the field.

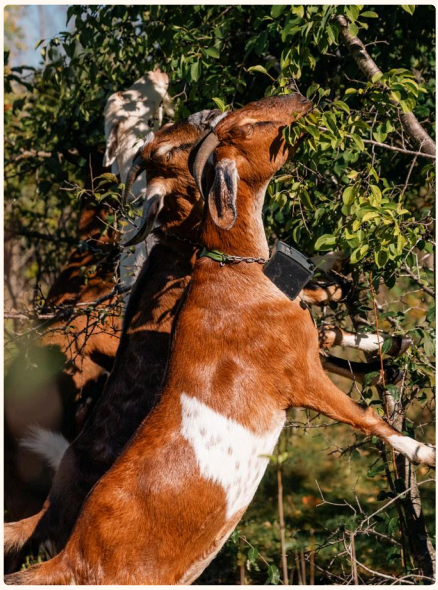

Actionable insights

Access clear insights on livestock activity and grazing patterns to support more efficient herd and land management.

Real-time monitoring

Track your livestock's location and status, with instant alerts for escape notifications or inactivity.

Why use Nofence?

Nofence is the world's first virtual fencing solution empowering producers to manage livestock with greater flexibility while saving valuable time and resources.

The system enables producers to graze land that was previously unused or impractical to fence. It supports livestock's natural grazing behaviors, and more sustainable farming practices by making rotational grazing and habitat management easier.

Proven in pasture with over 1 billion grazing hours and a 99.3% containment rate, Nofence is a reliable solution designed to meet the needs of modern livestock operations.

Efficiency

Save time and resources by replacing physical fencing, and give your livestock access to quality pastures, including

Flexibility

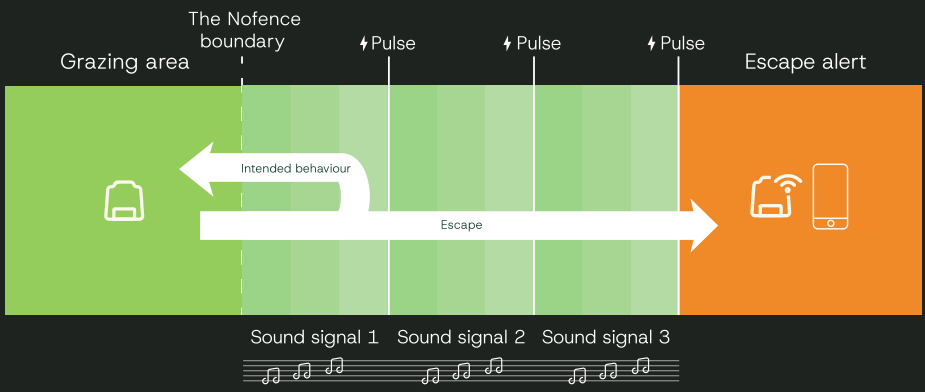

Adapt quickly to changing conditions. Create, edit, and adjust virtual boundaries in seconds,

Freedom

Enjoy true peace of mind. Monitor, locate, and access clear insights on livestock activity and grazing patterns at anytime,

How does Nofence work?

The Nofence system ensures reliable containment with an intuitive technology:

The Collar

When the animal approaches the virtual boundary, the collar plays an escalating audio warning. If the animal does not turn around, a mild but effective electric pulse is delivered.

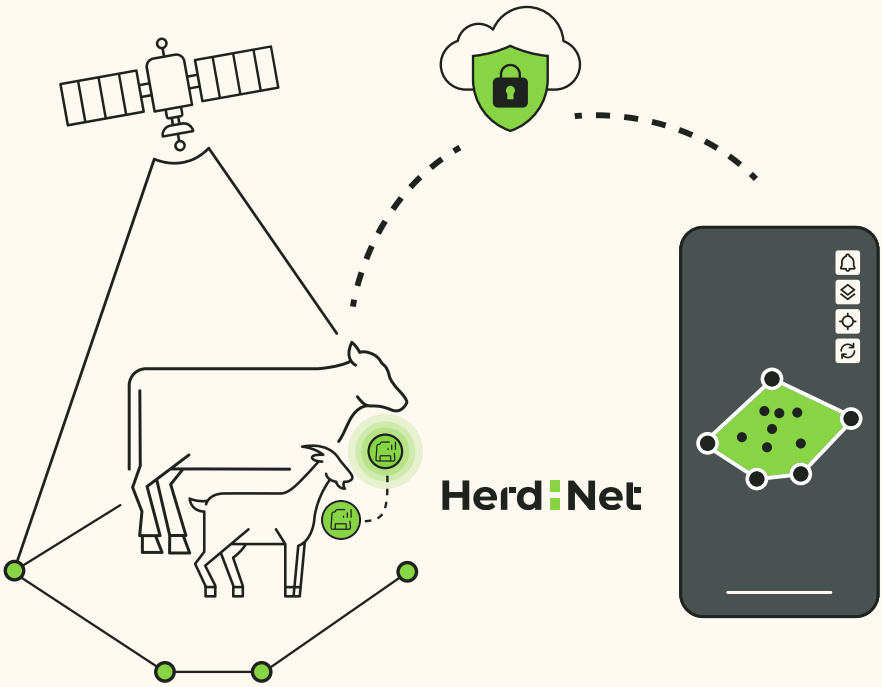

App Notifications

Receive alerts and updates via the app, allowing you to track the location and condition of your animals at all times.

Prioritizing animal welfare.

Designed with animal welfare at its core, the system supports livestock's natural behaviour, allowing livestock to roam as nature intended while still being contained.

The training process minimizes stress and makes electric pulses rarely necessary, with an average "warning-to-pulse" ratio of 96%. With real-time monitoring, you can promptly address any changes in activity.

AVAILABLE FOR CATTLE, SHEEP AND GOAT

The Collar

Each animal wears a solar-powered GPS collar around its neck. The collar tracks the animal's location and keeps it contained within the defined virtual pasture.

The App

Use the Nofence app to draw and adjust grazing bound-aries directly on Google Maps and monitor animal movement.

The System

GPS technology keeps the virtual fence precise and reliable. Through mobile networks and collar-to-collar communication, updates and monitoring stay fast and consistent – even in areas with poor signal.
